

DONMAR SKYROOF[®] ELECTRIC SUNROOF

SKYROOF III neatly trims any headliner, hard or soft. Above is a fully trimmed manual model with recessed crank handle. Below, an electric model with optional hard headliner trim.

The tempered glass panel slides fully open to provide a clear, unobstructed opening, with no loss of headroom.

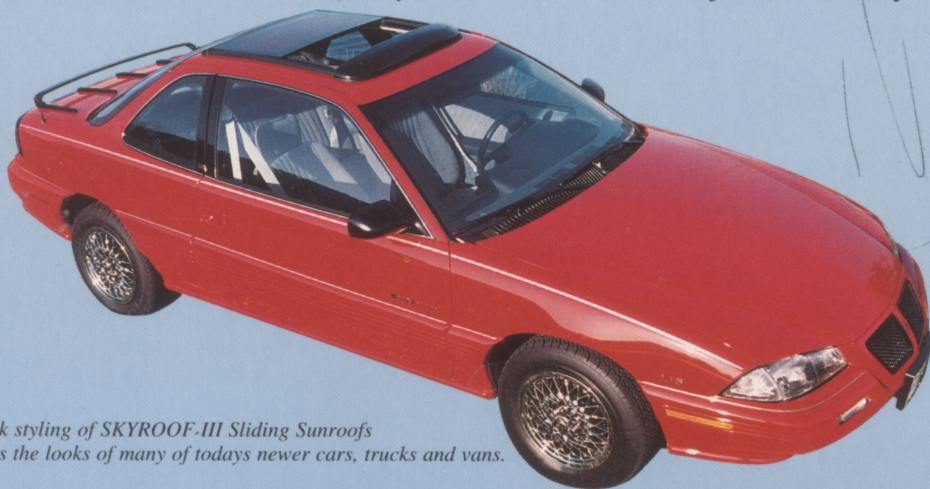

An aerodynamically designed wind deflector improves airflow and reduces wind noise.

The DONMAR SKYROOF[®] III is the first full featured aftermarket sliding sunroof to offer maximum opening and push-button electric operation at an affordable price. Available only from DONMAR, the leader in topslider sunroof technology, SKYROOF III fits a wide variety of cars and trucks and is precision engineered for years of trouble-free performance.

SKYROOF III is available in a choice of manual or electric models. Both incorporate a smooth operating cable drive mechanism which allows the tempered glass panel to lock in any position, from fully open to sealed closed.

The manual version is operated by a recessed crank handle, conveniently located in front of the sunroof opening, while the electric model effortlessly opens and closes at the touch of a button. Both are backed by DONMAR's exclusive *Lifetime Warranty*.

The sleek styling of SKYROOF-III Sliding Sunroofs enhances the looks of many of today's newer cars, trucks and vans.

SKYROOF[®] Sliding Sunroofs are backed by a limited Lifetime Warranty. See written warranty statement for complete details.
